OBJECTIVE

Experienced DevOps and Cloud Engineer with **+5 years** in **Spain, Romania, and the UK**, proficient in **Azure**, on-premise infrastructures, **PostgreSQL, Kubernetes, Docker** and Automation. Skilled in collaborative problem-solving, **CICD Pipeline, AWS, and Python scripting**, dedicated to delivering innovative solutions and continuous learning.

SKILLS

Languages: Python, Java, Javascript.

Technologies: Azure, Docker, Kubernetes, Flink, Mysql, Postgres, Grafana, Prometheus, Terraform.

EXPERIENCE

10/2022 - 10/2023 **VoxSolutions**

Devops engineer

- **Enhanced observability** by setting up **Prometheus Federation** across 7 datacenters around the world
- **Automated build and deployment** using **Ansible templates** for 12 microservices
- Effectively **set up monitoring solutions** for **Mongodb** and identified bottlenecks
- **Provided anomaly detection** to the traffic analysis team using multi-cluster **Elasticsearch**
- **Optimized MySQL's** read query time by a factor of **10X**
Elasticsearch / Argocd / SQL / Java / Ansible

4/2022 - 10/2022 **Driverly-Insurance**

Devops engineer

- **Integrated** Azure AD with Managed Azure postgres flexible server (not supported at that time)
- **Researched** and setup log management using **Azure Workspace**
- **Reduced** microservice Kubernetes manifest complexity with **Kustomize**
- **Introduced** Iac using **Bicep** and **ARM language**
Azure / Bicep Iac / Postgres / .Net

9/2021 - 5/2022 **UID**

Devops engineer

- Achieved **99% uptime** for Java and Python-based applications
- Delivered highly maintainable and secure **Oracle database**
- **Introduced high-availability and scalability** by converting monolithic application to microservice patterns
- **Conducted researches** to mitigate security vulnerabilities
Springboot / Python Flask / Oracle

8/2019 - 8/2021 **Securebug**

Devops engineer

- **Enhanced network visibility** with **Grafana, Telegraf** and **Prometheus**
- **Automated infrastructure provisioning** multiple hours of time using **Ansible** and **Terraform**
- **Conducted comprehensive security hardening** for over 30 VM instances
- **Improve Docker container security** deployment for CTF events with 98% uptime
- Researched and implemented a unified monitoring solution using **Grafana and Cloudflare API** creating a single dashboard
Grafana / React App / Telegraf / Cloudflare / Zeek
