in mohammad-javad-ekrami

### OBJECTIVE -

Experienced DevOps and Cloud Engineer with +5 years in Spain, Romania, and the UK, proficient in Azure,AWS, on-premise infrastructures, PostgreSQL, Kubernetes, Docker and Automation. Skilled in collaborative problem-solving, CICD Pipeline, and Python scripting, dedicated to delivering innovative solutions and continuous learning.

SKILLS -

Languages: Python, Java, Javascript, Golang

Technologies: Azure, AWS ,Docker, Kubernetes, Mysql,

Postgres, Grafana, Prometheus, Ter-

raform.

#### **EXPERIENCE** -

10/2023 - Present Freelance

Anywhere (remote)

Devops engineer

- Implemented IaC using Terraform to cloud-based environment AWS
- Designed an ETL pipeline using S3, Lambda, Kinesis to ship events to Dynamodb and monitor them.
- · Provided connectivity to on-premise and cloud and reduced the cost of maintanence by 10%
- Set up and configure multi-cluster **EKS** for development, testing and production

Terraform / AWS / S3 / Lambda / Kinesis / EKS / VPC

## 10/2022 - 10/2023 VoxSolutions

Bucharest (remote)

Devops engineer

- Migrated from Docker swarm to Kubernetes to implement CI/CD using Arogocd
- · Reduced product delivery time with factor of 5x by implementing continuous delivery
- · Deployed Prometheus Federation across 7 datacenters which decreased debugging time in half
- Automated build and deployment using Ansible templates for 12 microservices
- Effectively  $set\ up\ monitoring\ solutions$  for Mongodb and increased performance by 20%
- · Provided anomaly detection to the traffic analysis team using multi-cluster Elasticsearch
- · Optimized MySQL's read query time by a factor of 10X
- Improved analytical performance for traffic analysis team by migrating from Monogdb to Elasticsearch by the factor of 54X

 ${\tt Elasticsearch~/~Argocd~/~SQL~/~Java~/~Ansible~/~Redis~/~Rabbitmq~/~Kafka}$ 

Cardif (remote)

Devops engineer

Devops engineer

- · Integrated Azure AD with Managed Azure postgres flexible server (not supported at that time)
- · Researched and setup log management using Azure Workspace
- Reduced microservice Kubernetes manifest complexity with Kustomize
- · Reduced deployment complexity using Bicep and ARM language lac

Azure / Bicep Iac / Postgres / .Net

9/2021 - 5/2022 **UID** 

- Achieved 99% uptime for Java and Python-based applications
- Deliverd highly maintainable and secure Oracle database
- Introduced high-availablity and scalability by converting monolithic application to microservice patterns
- Conducted researches to mitigate security vulnerabilities

Springboot / Python Flask / Oracle

8/2019 - 8/2021

Nordic Defender

Stockholm (remote) Devops engineer

- Enhanced network visibilty with Grafana, Telegraf and Prometheus
- Automated infrastructure provisioning saving multiple hours of time using Ansible and Terraform
- · Conducted comprehensive security hardening for over 30 VM instances
- Improve Docker container security deployment for CTF events with 98% uptime
- Researched and implemented a unified monitoring soluion using **Grafana and Cloudfalre API** creating a single dashboard

Grafana / React App / Telegraf / Cloudflare / Zeek / VMWare
